Results Entry - Historical Inquiry

Seacoast is proud to announce the availability of a new feature for Results Entry, *Historical Inquiry*. With this new feature, historical results can easily be viewed directly from the Results Entry screen. By using the SurroundLab PID, the system can collate and display all previous results for the selected Result Code and Date Range, allowing you to quickly assess the current result against previous values. Used in conjunction with Delta Checking rules, this new option further enhances your ability to assess questionable results rapidly.

For more information about this exciting new feature, please contact your Seacoast Support Representative.
